YOTTAFLEX AI
RECRUITMENT DRIVE

CANDIDATE PROJECT FAQ

72 HOURS • PUBLIC GITHUB • TRANSPARENT AI USE • INDIVIDUAL WORK

1. When does my 72-hour window start?

When YottaFlex AI sends you the project. Your deadline is exactly 72 hours later, using the recorded send timestamp and its time zone.

2. Can I submit early?

Yes. You may submit as soon as you are ready. Keep your public repository available and editable until the 72-hour deadline; the latest version at the deadline is evaluated.

3. How do I submit my repository link?

Create a new, dedicated public GitHub repository. Send the link from the same email address you used during recruitment and follow the submission instructions provided.

4. What belongs in my repository?

Include your code, prompt history, and relevant supporting artifacts in a clearly identifiable directory. There is no fixed list of documents or prescribed format.

5. Which AI tools may I use?

Any LLM or AI coding tool is allowed, including cloud-based and locally hosted tools. AI use is unrestricted; your judgment, understanding, ownership, and validation matter.

6. What prompt history is required?

Include all prompts submitted to every AI tool you used. AI responses are optional. If a tool cannot export prompts, keep a reasonable record and disclose the limitation.

7. Must I write all code myself?

The project must be your individual work. AI and public learning resources are allowed; implementation help from other people is not. Understand the core logic, key design choices, dependencies, and limitations.

8. Can I choose my own technology stack?

Yes. Choose suitable languages, frameworks, and storage. Use only free or locally runnable services, and avoid unusually large or slow dependencies where possible.

9. Must I provide a live demo or automated tests?

No hosted demo or automated test suite is mandatory. Provide clear setup/run instructions and demonstrate how you verified the core functionality. Document environment needs and limitations.

10. Can I reuse existing code?

Standard dependencies and small illustrative snippets are acceptable. Do not import a complete solution or existing code that performs the core project work. Follow licenses and provide attribution where required.

11. What if requirements are unclear or work is incomplete?

Make reasonable assumptions and explain them. Partial solutions are acceptable if you state what works, what remains incomplete, known limitations, and next steps. Explain any requirement deviations.

12. What must I keep out of a public repository?

Never include secrets, credentials, personal or sensitive information, or proprietary code you are not authorized to publish. Use safe sample data and local configuration; explain setup in the README.

BE READY TO EXPLAIN YOUR DECISIONS, VERIFY YOUR WORK, AND OWN YOUR SUBMISSION.
